

Project 1 description

Create a GUI java project that is composed of a multithreaded server application, and a client application for accessing server.

* For the client side, the user enters a valid username and a password for entering the system.

After the user enter the system, he should enter the following in a text field:

1. Full name
2. Email
3. Phone number

The client application has a “submit” button for writing data to the server.

* For the server side, there should be a “show data” button to view all user’s data in a text area.
